Local Economic/Social Issues

Mental health is a serious issue in India and Bangladesh due to the impact of COVID-19 and rapid social change. In each of the two countries, 56 million people or 27.8% of the population suffer from depressive symptoms and 38 million people or 21.7% suffer from anxiety disorders. There is a chronic shortage of professionals to help people with their symptoms.

Details of Demonstration

The multimodal AI observes the daily condition of individuals and uses the analysis results to provide mutual support with several trusted people. If there is an abnormality in the mental state, the member will notify medical institutions for treatment.

Expected Outcome in the future

Significant reduction of more than \$1 billion per year in overall social health care costs through prevention. Global deployment of a new Web3 service that distributes log data necessary for medical treatment to medical institutions, insurance companies, etc. with anonymity, and appropriately connects them with specialists.
