Daiki Rika Kogyo Co., Ltd. has engaged in manufacturing of physical and chemical apparatus, since it was founded in March, 1941. From that time forward, we have engaged in the designing, manufacturing and marketing of agricultural laboratory equipment and soil testing instruments. We aim at making effective and high quality equipment and instruments for soil and water treatment.

1. This equipment is able to measure TPH (Total Petroleum Hydrocarbon) in the soil using just 1g of soil sample.
2. Battery powered water turbidity meter with data logger is able to measure and log continuously for one year.
3. Battery powered soil moisture meter with data logger is able to measure continuously for one year.
4. Our new RK4 II crushes and sifts soil simultaneously without any contaminated soil dust.

Products & Technologies / Competitive Advantage & Opportunities for Partners

Business Development Goals:

We are searching for dealers to sell Daiki products particularly in the U.S. We want to contribute to society by producing Daiki products that will help to preserve the environment. (may want to remove: of earth and water.)

Summary of Products/Services/Technologies:

Equipment for environmental research of soil and groundwater/Soil and groundwater sampling equipment/Special test equipment (for soil and water)/ Digital cone penetrometer (for soil hardness)/ Soil permeability measuring instruments/ Irrigation system/Data logger/Soil moisture meter
