Eco Technology Co., Ltd. has developed a unique tornado style wind turbine. The patented blade design allows the turbine to generate electricity at wind speeds as low as 3m/sec (11 km/hr) and as high as 37 m/sec (133 km/hr), with minimal noise and vibration. Unlike conventional wind turbines, Eco Technology's turbine rotates vertically, regardless of wind direction.

Products & Technologies / Competitive Advantage & Opportunities for Partners

Eco Technology wind turbines are designed with the following features:

- + Small footprint - can be installed safely in limited public space
- + Quiet operation
- + Bird friendly – no bird strikes
- + Efficiently generates power at a wide range of wind speeds

Installations include:

Freeway rest areas, airports, corporate headquarters and factory roof tops. We also have experience using as a water turbine for irrigation applications.

Additional Applications:

The unique and refined design of our wind turbines is attractive and can be used for corporate signage or as advertising space. Furthermore, devices such as security cameras or WIFI routers can be installed on the wind turbine's structure.
