Tenjin Manufacturing Co., Ltd. is engaged in the design and construction of livestock and organic waste composting systems. With our many years of experience, we are able to design and produce easy-to-use and competitively priced composting systems to meet our customer's individual requirements.

## Products & Technologies / Competitive Advantage & Opportunities for Partners

Tenjin's TM (Perpendicular) Fermentation screw mixer system provides an optimum mixing and fermentation process to treat livestock waste and organic sludge in small to large-scale composting applications.

Features include:

- + Easy maintenance
- + Effectively mixes and aerates tanks up to 10 metres in width and 2 metres in depth
- + Screws grind the sludge into small particles to generate high quality compost
- + High temperature fermentation achievable in cold climates
- + Custom design available with warm air blowers and spray options

Applications:

- + Cattle and Hog waste treatment
- + Small community sewage sludge treatment
- + Municipal organic solids composting

About 300 systems installed in Japan

Business Prospects:

- + Trade or engineering companies working with agricultural or industrial waste treatment installations and equipment
