

In an emergency, one-touch notification!

Products

Hospital Guard/School Guard

1. About Products

It is a wireless emergency call system that pressing the remote control can immediately notify the room number to the staff room in an emergency.

- 1) The staff in the hospital possess a remote control and can notify the staff room in case of emergency.
- 2) At the staff room's receiver, room numbers and divisions of "emergency" / "contact" are taught, and relief is immediately sent to the site. At the same time, the communication device can notify relevant parties, police and security companies outside.

2. Advantages

- Emergency reports are transmitted the moment the remote-control button is pressed.
 - Simple installation work
- Since it is a wireless unit, any wiring to connect the room to the staff room is unnecessary.
- A long distance can be reported by the repeater.
 - We can receive from maximum 250 rooms with one receiver.
 - Low running costs

3. Performance

<Case Study> National Hospital Organization Kurihama Medical / National Hospital Organization Shimofusa Psychiatric Medical Center / National Center of Neurology and Psychiatry / Youwa hospital

<Specification> - Article 38-24 of the Radio Law
- FCC Authentication(America)
