Our Strengths - Research and Development of Core Technologies Aimed at Vertical Integration

Committed to our long-term goal of societal integration, while proceeding with vertical integration and development of specialized blockchain applications through development of dedicated protocols that are tailored to specific business conditions

Our Strengths “Tapyrus”

An Original Blockchain Concept

<https://github.com/chaintope>

- Original public blockchain protocols optimized for enterprise use
- A permissionless system with a robust construction for use by corporations

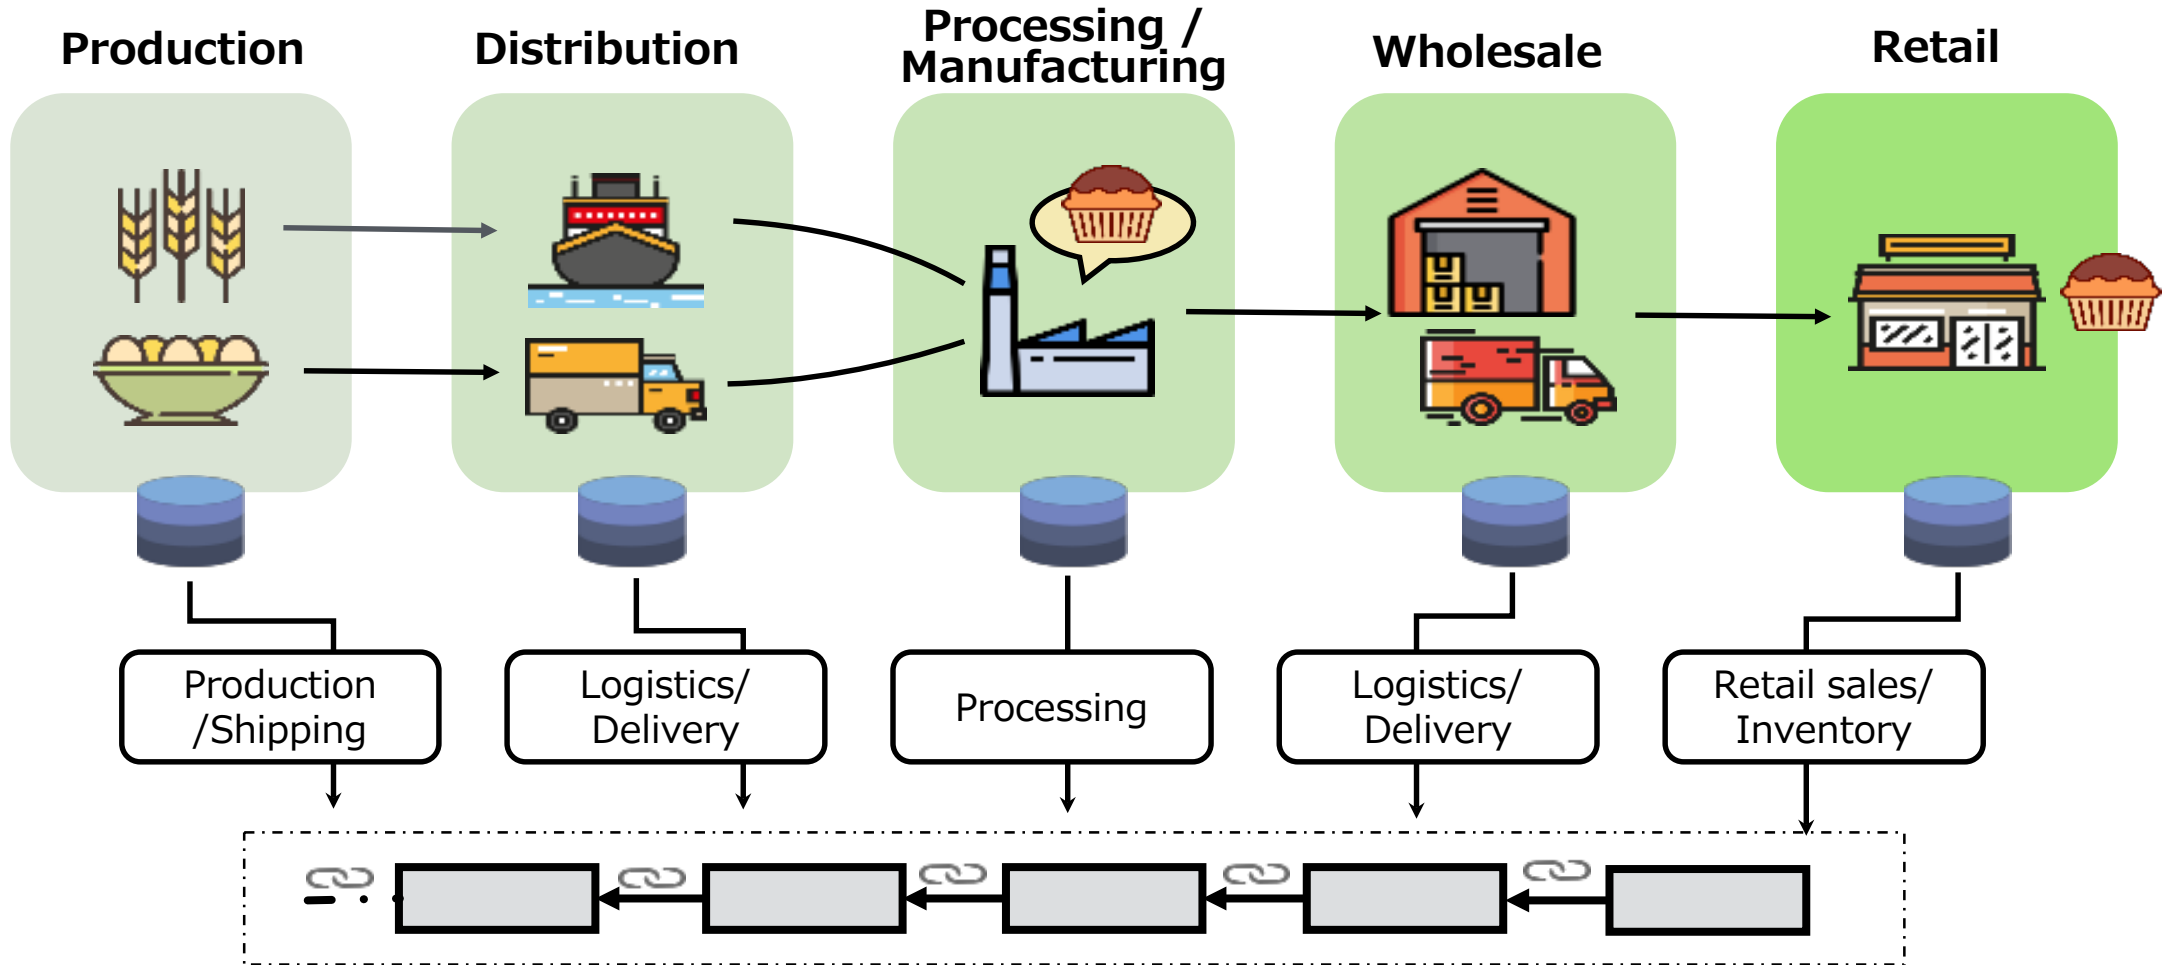

- Solving the issues with the blockchain for predicted enterprise use cases
- Resolving speed and governance issues through “Federation Type” governance systems
- Handling of Smart Contracts and contract execution support based on Oracle usage external information
- Through the introduction of signature technologies such as Schnorr signatures and threshold signatures, the chain can be streamlined, and scalability issues can be solved
- Deals with Privacy and Fungibility

✂ Test operation in a closed test network has been completed. Currently implementing functionality for use by businesses such that business applications utilizing Tapyrus can be implemented next spring

Traceability

Paradium - A paradigm shift in the supply-chain

Providing a new framework of trust and safety through end-to-end traceability

Our Achievements - Traceability

A traceability pilot project with medical products for AEON Asia
