V1.0

Vision

Robotics for Fun Living

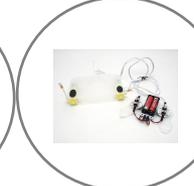

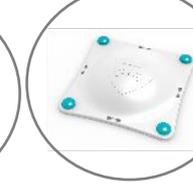

A pioneer in communication robots

that has designed, manufactured, and sold many robots/loT products over the past 10 years and has a deep understanding of market needs, including design and functions.

In-house Products

IoT Product Development (80 or more per year)

Solution Business

					
BOCCO  10,000 sold	Qoobo  18,000 sold	necomimi 120,000 sold	create-a-critter robot kit 7,000 sold	Smart Parking NTT DoCoMo	popIn Aladdin popIn

Makasete BOCCO
Tokyo Gas

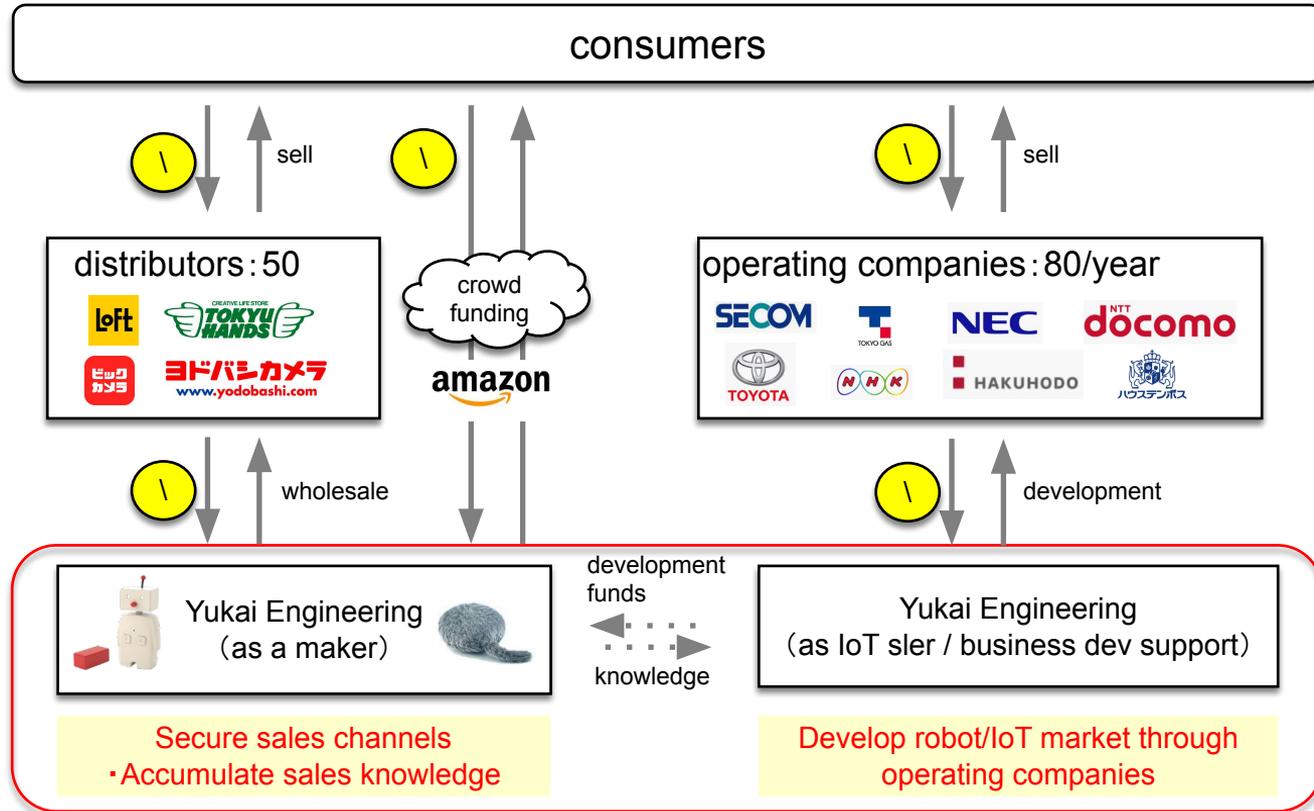

J-Startup2019
Selected by the Ministry of Economy, Trade, and Industry

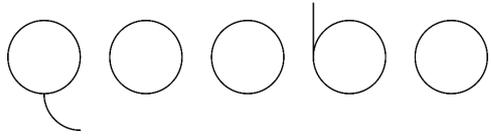

Despite being a small team of about 35 people, Yukai has won the Good Design Award three times for **in-house product design, circuit/mechanical design, and software development.**

CEO Shunsuke Aoki is also strong in design, serving as a judge for the Good Design Awards.

Yukai Engineering's differentiating factor is its unique position as a "maker."
Our business model is structured to generate profit in "IoT product development."

Husky Gray

French Brown

Silky Black

Disney Series (Marie)

Qoobo is a therapeutic robot in the form of a cushion with a tail. When caressed, it waves gently. When rubbed, it swings playfully. And, it occasionally wags just to say hello. It's comforting communication that warms your heart the way animals do.

Petit Qoobo is the new sibling of Qoobo. Petit Qoobo reacts not only to the user's stroking but also to the surrounding natural soundscape. In addition, when you are cuddling Petit Qoobo, you'll be able to hear its "heartbeat."

BOCCO

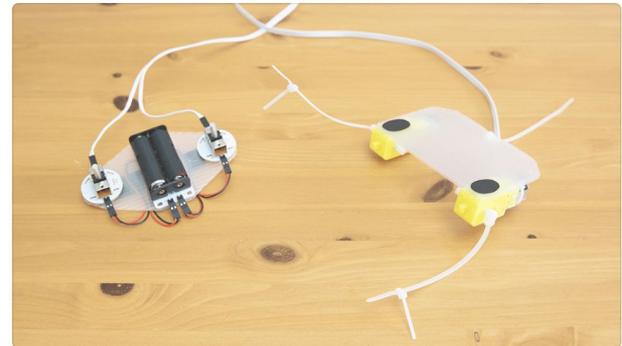

A Communication Robot That Keeps Families Connected

The BOCCO app is a family bulletin board that allows you to exchange messages with your family and check sensor responses. When you talk to BOCCO, it is sent as a voice message. You can also send a text or voice message through your smartphone.

Make your own critter robot!

The create-a-critter robot kit makes it possible to create robots resembling critters using everyday materials such as cable ties. The kit allows for great use of the imagination to create a wide variety of robots from the same set of materials.
