

iWave Japan, Inc. (India)

- ◆ Introducing advanced technology by Indian engineers, the company develops IoT-related hardware and software (remote monitoring systems, bus tickets purchasing systems, etc.). High-performance CPU development is the core strength.
- ◆ In collaboration with a Japanese railway traffic signal manufacturer, the company conducted experimental studies to develop a system to manage remotely via the Internet a railway signal monitoring system which is conventionally controlled via a closed network.
- ◆ This system will enable uniform management of signal facilities required for railway operation, and it is expected that the system will be used for predictive maintenance by making use of Big Data, while reducing the labor required. The company eyes introduction into emerging Asian countries, together with practical application in the domestic market.
