

Philips Japan, Ltd. (Netherlands)

IoT (Medicine)

- ◆ A leading medical device manufacturer based in the Netherlands.
- ◆ The company conducted experimental studies in collaboration with Kobe University and Nagasaki University on a system which supports remote pathological diagnosis using ICT and digital technology (a digital pathology system). The unified system enables sharing of pathological images and allows double checking and consultation of diagnosis results among multiple hospitals.
- ◆ It is expected to alleviate problems caused by the lack of pathologists, improve labor productivity and advance the quality of pathological diagnosis and medical efficiency, which will lead to the suppression of medical expenses. It will also promote regional medical cooperation.
