

Space-Time Engineering Japan, Inc. (USA)

- ◆ A software development company based in Los Angeles. Their simulation software for V2X (vehicle to everything) communications is the best selling commercial V2X evaluation tool in the world.
- ◆ Using one of the V2X technologies called Delay/Disruption Tolerant Networking (DTN), the company conducted experimental studies on an information sharing system for disaster medical response, without relying on communication or power infrastructure, in cooperation with Kochi Prefecture, its local governments and several universities nationwide.
- ◆ The system works effectively for registering and triaging injured people without power and network supplies, using commonly-used smartphones, tablets and notebook PCs. Its capability can also be extended to enable the sharing of information from electronic medical record systems and other information sources at various facilities spread over disaster-hit areas for smoother disaster response and recovery operations.

IoT (Disaster response)
