# Hakuzo Medical Corporation

Address: 2-4-9, Tokuicho, Chuo-ku, Osaka 540-0025

URL : <https://www.hakuzo.co.jp/>

## Company overview

Established in 1953, Hakuzo Medical Corporation have been growing steadily year by year, supplying mainly medical disposables to hospitals in Japan customers overseas. We have 2 plants in Japan, with 1 coming up in Thailand. We are ISO13485 : 2003 certified and our two plants, produce in compliance with GMP and QMS that are recognized by Japan Pharmaceutical Affairs Act. We also have an overseas branch in Thailand.

## Products/ Services overview

We specialize in infection control products, kit products, gauzes, absorbent cottons, bandages, adhesive tapes, gynecology products, and nursing care products.

## Potential business matching partners

We are looking for potential local partners who specialize in medical disposables.

## Company overview

As a company that supports all forms of medical care (All Medical), we provide IT solutions that provide comprehensive care from the acute phase of medical care, from the onset of illness to the recovery phase, to the chronic phase of medical care, including rehabilitation, recuperation, and nursing care.

## Products/ Services overview

### ■A communication app for medical professionals "Join"

This is the first app registered as a medical device and listed in public health system in Japan. (In addition, it has received FDA (USA), CE (EU) and ANVISA (Brazil) approvals.)

A system that allows real time communication between medical personnel in mobile and cloud computing with medical information linked to hospital systems (e.g.PACS).

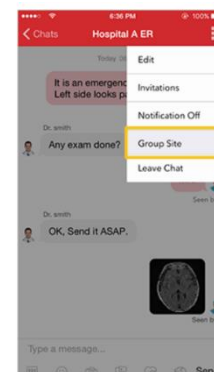

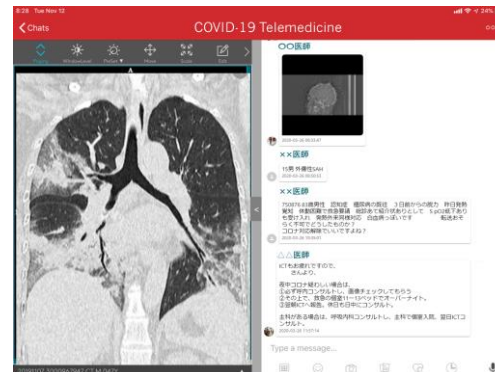

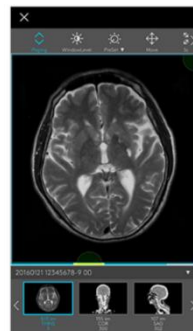

### ■A triage app for EMS providers "Join Triage "

Based on the triage results, it displays a map and list of recommended medical facilities that can provide the best treatment for patients. Integration with "Join," the results of triage will be sent to the medical institution where the patient is being transported.

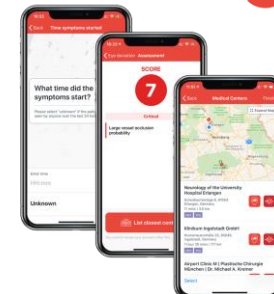

## Potential business matching partners

We are looking for a company that can be a partner in the deployment of the system, especially to establish a telemedicine system in the local area.

Ideally, the company would be dealing with systems such as electronic medical records and PACS because of the installation and implementation work required.

## JoinTriage

## Company overview

Since our predecessor, under the founding principles "Active and Steadfast ", we Morito Japan have been providing apparel trims (parts) such as eyelets, hooks, and MAGIC TAPE® for over 110 years. Currently, we have expanded our business field not only to apparel trims, but also to transportation equipment, such as cars and railways, and video equipment fields. By doing so, we have developed businesses deeply integrated into people's lives. In 2019 Morito Group went through an organizational reformation, and Morito Japan Co., Ltd. has become a 100% subsidiary of Morito Co., Ltd. We will thoroughly assess what we currently have and by combining it together, we will find new discoveries. Also, we will focus on unknown fields and respond to the market with ideas and efforts. Moreover, creating new values are not limited only to products. Although our company name has "Japan" in it, we consider the entire world as our field. We will share the joy of creation with our customers by doing things that we can do and things that only we can do, and we aim to advance even further.

## Products/ Services overview

- PROSAFETY My On-the-Job Back Assister
- PROSAFETY My On-the-Job Back Supporter

## Potential business matching partners

We would like to sell our own brand "PROSAFETY" products overseas as well, and would like to develop overseas sales channels by setting up sales agents and sales representatives locally.

# Tsubota Laboratory, Inc.

Address : Toshin-ekimae Bldg. 34 Shinanomachi Shinjuku-ku, Tokyo 160-0016

URL : <https://www.tsubota-lab.com>

## Company overview

Tsubota Laboratory Inc. is a privately held clinical development stage company focusing on out-licensing of the globally patented "Violet Light technology" in the area of ophthalmology and CNS. Tsubota Laboratory, Inc. is a spin-off from Keio University, School of Medicine, Department of Ophthalmology, led by distinguished professor Dr. Kazuo Kubota.

## Products/ Services overview

### TLG-001

TLG-001 is our lead product that is a unique eyeglass frame equipped with Violet Light LED unit, to be used for 3 hours a day for the suppression of myopia progression. Myopia is a condition in which the visual image comes into focus in front of the retina of the eye, resulting especially in defective vision of distant objects and may lead to blindness. Progression of myopia almost means the prolongation of axial length of the eye.

Recent studies revealed that environment factors play more important roles than genetic factors for developing myopia, i.e. spending 2 hours or more exposure to sunlight suppresses the progression of myopia. Our research found that Violet Light, which is 360nm-400nm wavelength visible light found abundantly in sunlight, plays a critical role in suppression of myopia. Violet Light upregulates EGR1 which is known to suppress elongation of the axial length, thereby suppresses progression of myopia.

TLG-001 has just been completed PI/II study in Japan and the results are now under statistical analysis.

### TLG-003

Keratoconus is characterized as a bilateral, non-inflammatory, progressive corneal ectasia. Corneal collagen cross-linking (CXL) was first introduced by Seiler et al. as a promising technique to slow or stop the progression of keratoconus. In CXL, riboflavin is administered in conjunction with ultraviolet A (UVA, 365 nm). Corneal epithelial peeling in CXL induces not only ocular pain after surgery but is also a potential risk of corneal infection. To avoid these complications of CXL surgery, Tsubota Laboratory, Inc. developed a novel minimally invasive medical device using violet light (VL) source on eye glasses, which was named "TLG-003". TLG-003 irradiates 375 nm wavelength VL source to the cornea and is worn daily without limitations. Minimally invasive cross-linking using TLG-003 is defined as "KeraVio®" which is useful for the treatment of progressive keratoconic patients. KeraVio®/TLG-003 radiates 375 nm wavelength VL source to the cornea. The VL can be manually "Turn-on" for 3 to 5 hours per day for the treatment period. We confirmed that KeraVio treatment using TLG-003 and riboflavin drop stopped the progression of keratoconus in a pilot study and are starting the new protocol using TLG-003 alone (Kobashi et al. BJO 2020). KeraVio® is easy for patients with keratoconus to begin the treatment using TLG-003 eye glasses and may become an option for the treatment of keratoconus and a novel platform for corneal ectasia.

## Potential business matching partners

We are looking for partners globally to manufacture, conduct clinical study, register and market this novel Violet Light emission eyeglass frame as a medical device for prevention of myopia or treatment of keratoconus.

## Company overview

FUJI LATEX is one of Japan's leading manufacturers of condoms and probe covers, and has more than 50 years of manufacturing experience.
