Disaster Prevention information transmitting ICT infrastructure

This explains wisdom at the time of emergency, which usually serves even in everyday life. Notify the situation when an emergency situation is occurring.

By receiving information from BMKG, alert information for each area can be delivered in all areas of Indonesia.

Test deployment at Medan airport (2018.09~)
In Indonesia there are risks of natural disasters such as volcanoes and earthquakes. Not only for citizens, but also for foreigners such as tourists. Disaster response mechanism required.

It emphasizes the Indonesian government, and disaster prevention is an important theme for Japanese ODA assistance.

By sending disaster information at airports and hotels, it is possible to provide safe and secure space for citizens and tourists.
① Show weather information

② We usually provide wisdom of disaster prevention

③ Distribution of various disaster alerts and damage situation
**DP information transmitting ICT infrastructure**

Utilizes and improves existing infrastructure to create new media
Establishes a infrastructure comprising a system that reliably transmits disaster information in an emergency, and contents that suggest actions at ordinary times/in an emergency
Generates a new revenue source by developing the infrastructure as advertising media

**DP information transmitting platform**

Transmits disaster information through various media
Suggests time-series activities in an emergency
Interlocked with seasons, hours and places
Provides safety confirmation services Not only a disaster alert system

- Transmits disaster information through various media
- Suggests time-series activities in an emergency
