URL	https://www.akiyamakikai.co.jp/en/index.html
Business content	AKIYAMA is a seafood processing machine manufacturer with principles of "self-production, own brand, direct sales". Through self-production, we can effectively accumulate experience and know-how of development and manufacturing. Consequently, we can challenge higher level technology. With the pride in our own brand, employees can work hard in order to create safe, convenient, labor-saving and manpower-saving processing machines. With the direct sales, we can listen directly to customer's request, and can provide appropriate and speedy service. In addition, we can make use of customer's voice to design and develop new products. Through this attitude, AKIYAMA has delivered diverse fishery processing machines to the market. AKIYAMA believes that our most important management resources are 4,000 customers in Japan and overseas. In order to satisfy more customers, we will continue to put our heart into developing, manufacturing and selling processing machines over a wide range of fields as well as fishery processing, and building a system for fishery processing plants. We will contribute to improvements of dietary culture.
Sales performance	Export actual result countries USA, Canada, Russia, Spain, China, Korea, Indonesia, Singapore, Thailand, Taiwan, Vietnam, Fiji, Kiribati, South Africa, UAE, India, Norway, Philippines, Mexico. Agent abroad: Korea, Thailand

URL	https://www.omorithailand.co.th/th/
Business content	Omori has been developing original packaging equipment that meets the needs of the times. Our packaging machines have a good reputation and are used for quality packaging all over the globe. It was more than 30 years ago when Omori sold its first machine in Thailand and our machines are now used all over Thailand. We keep offering our tailor-made packaging solutions while we focus on developing our sales and after-service team that can deliver further support to our customers' production.
Sales performance	Our customers know our machines to be durable, strong and extremely reliable. They know that we have a culture within Omori that values taking on the challenges that other companies cannot. We are willing to go the extra mile to help and deliver the most suitable system that will improve our customers' packaging. In addition, Omori Thailand is one of a few companies that have a subsidiary, not a distributor or agent, in Thailand so we believe Omori can offer better support to customers.

Black garlic aging warehouse
Model TG-1500: The model uses steam as a heat source

[Catalog Link](#)

Molding method that replaces intestinal sausage

Irradiate microwaves while feeding raw meat into the resin pipe.

The sausage (raw meat) in the pipe comes out from the outlet of the pipe while solidifying.

The temperature of the sausage that came out is about 80 °C. Wrap it as it is and start the next process.

In addition to processing meat, you can also make sweets using wheat flour, rice flour, etc.

This TM-1000 is for trial research.

1 hour of production capacity is 10kg raw meat from 7kg.

The power supply requires a single-phase 200V 15A outlet.
