As a Room Interior Manufacturer

Aluna currently delivers approximately 200,000 frames per year within Japan. These frames are used to display a wide variety of items, including cherished photographs, award certificates from championship wins, oil paintings, and signed jerseys. The common thread among all these displays is the reaction they evoke—many people are amazed, saying, “Wow!” or “Beautiful!” as they experience the joy of showcasing their treasured pieces. Compared to Western countries, many Japanese people are hesitant to put holes in their walls. To address this, we are committed to developing and proposing products and accessories that make it easier to display frames without concern. Our goal is to become a "room interior manufacturer" that adds color and inspiration to as many people's lives as possible.

ALUMIUM SERIES

ALUMIUM is the word from which “aluminum” is derived. This is a brand of premium aluminum frames launched by Aluna — a company that has been making aluminum picture frames about 60 years.

CUT

The edges are trimmed off to create an impression of sharpness. When viewed from the front, the frame is not very noticeable, and when viewed from an angle, it gives an impression of lightness, as if it were floating on the wall surface.

Winner of the 2019 Good Design Award & 2020 DFA Asia Design Award.

LEAN

LEAN is a frame with sides slanted at a 10-degree angle. This tilt allows the sides to touch the floor and stand stable against the wall. Winner of the 2019 Good Design Award.

RIM

This is a simple frame with a rim around the edge. A 1mm thick, 5mm high rim surrounds the perimeter, giving a subtle depth to the frame. Winner of the 2021 Good Design Award.

DUO

DUO is a frame that can be used on both sides. Thanks to the position of the clasp, different from that of conventional products, the frames can be viewed in their ideal form, without tilting. Winner of the 2022 Good Design Award.

SLICE

SLICE is a frame composed with a slight inward slope. The space between the frame and the work is made as thin as possible, creating a sense of unity between the two. Winner of the 2024 Good Design Award.

FLAP-PL

FLAP-PL is a frame that slopes gently from the center outward. With a triangular cross-section, this frame is wide and elegant when viewed from the front, but thin and light from other angles.

DESKTOP EASEL

This tabletop easel is made of clear acrylic. It has a sophisticated appearance and is lightweight and easy to use. An easel designed to subtly enhance the appeal of the artwork while maintaining a simple, understated presence.

Collection Case

With 60 years of experience in frame-making, Aluna not only produces frames for flat artworks such as paintings and posters but also manufactures Collection Cases that beautifully display three-dimensional items like jersey, records, and balls.

Front-Open Jersey Display Frame

Designed with a front-opening mechanism, this jersey case allows for easy replacement from the front. Simply slide the hanger through the neckline —no hassle required. A highly convenient and user-friendly storage solution for jerseys.

Front-Open Basketball Uniform Display Frame

This is a case specially designed for basketball, in response to requests from clients who wanted to display the top and bottom of their uniforms together.

Compact Jersey Display Frame

A perfect display frame for neatly and compactly showcasing jerseys and T-shirts. Ideal for exhibiting multiple uniforms together.

Front-Open Baseball Bat Display Frame

We designed our original baseball bat holders to easily and stylishly display a baseball bat. You will be amazed at how easy it is to display bats in our frames.

Flag Display Case

A display frame designed to beautifully showcase thick flags such as championship banners, school flags, and corporate flags.

Tabletop Ball Case

A dedicated pedestal is included to enhance the display and make it even more visually appealing. It is designed to accommodate not only soccer balls but also basketballs, volleyballs, and various other types of balls.

Drawing Frame

We offer a wide selection of frames to beautifully showcase photographs, art posters, certificates, and more.

Our collection includes professional-grade frames that are not available in regular retail stores. These frames are perfect for those who wish to bring the elegant aesthetic of luxury hotels and fine restaurants into their own homes.

HVM

The gold lines on both the inner and outer edges of the frame add a refined touch, enhancing the artwork's presence. A bestseller for over a quarter of a century, this frame has remained a favorite among many users.

Crete

The 8mm space between the acrylic and the artwork creates a sense of depth. Depending on the lighting, the shadows cast along the edges subtly enhance the beauty of the piece.

Étretat

Perfect for enhancing modern artworks with simplicity and elegance. From the front, it appears sleek and slender, while from an angle, it offers a subtle sense of depth.

Lisse

A simple yet substantial frame with a 47mm width and a slight inward slope. Its name is derived from the French word for "smooth."

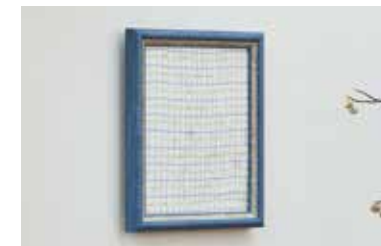

Héritier

The gentle curve on the inside of the frame creates elegant shadows and a three-dimensional effect. This is a simple frame with depth. This is the successor to the MGB model, which had been sold for approximately 50 years.

T25

A refined, minimalist design stripped down to its purest form. Despite its slim frame width, it maintains strength and can accommodate larger sizes.

APS-02

A charming frame with soft colors and a delicate design, making it a perfect match for watercolor paintings. Ideal for pressed flowers and embroidery artworks as well.

Individually handcrafted

The production of frames is basically a custom size production. Our workers make the product according to the details of the order. We wrap surface materials on extruded aluminum materials. We then cut, assemble, inspect, pack, and ship the frame, all from our factory. We strive to make each product with authenticity, through precise machine operations and detailed handiwork. While previously based on mass production of a small range of products, we are now building a production system that can immediately respond to diverse needs for a wide variety of products and in small lots.
