[VX2022 Program](#)

【 VX2022: Where Clean & Green Tech Marketmakers Meet to Optimize Opportunities for Transformational Climate Infrastructure Investments 】 VerdeXchange's 15th annual cross-platform California conference took place at The Omni Los Angeles Hotel In DTLA on June 19-22 to examine how cities, states, and regions, in collaboration with public and private partners and community stakeholders, should and will leverage the \$1.1 trillion in US infrastructure funding now flowing, after decades of neglect, to optimize economic recovery, maximize transformational climate infrastructure investments, and accelerate growth of the global clean energy economy. VX2022 built on and confirms the central thesis of previous VerdeXchange conferences: California and the Western States are opportunity-rich markets for renewables, sustainable practice, and finance as well as portals to all of North America.

▼Japan Hydrogen Forum (JH2F) at VerdeXchange

Not only Japan Hydrogen Forum exhibited at VerdeXchange but also some of the forum members joined panel discussion as a panelist and gave a presentation of their hydrogen-related project. VerdeXchange set up the panel titled “VX H2 Super Track” on 6/21 morning, and many of attendees assembled the hall to catch up with the latest information on Hydrogen projects and perspectives.
